[1000 rows x 4 columns]

Note: Only the head of the SFrame is printed.

You can use print_rows(num_rows=m, num_columns=n) to print more rows and columns.

find if the dog dog columns are correctly classified

```
In [152_
     def is_dog_correct(row):
        dog dog val = row['dog dog']
        dog cat val = row['dog cat']
        dog_automobile_val = row['dog_automobile']
        dog_bird_val = row['dog_bird']
        if (( dog_dog_val > dog_cat_val) & (dog_dog_val > dog_automobile_val) & (
          return 1
        else:
          return 0
In [157...
     dog distances correct set = dog distances.apply(lambda x :is dog correct(x))
In [158_ dog_distances_correct_set
Out[158_ dtype: int
     Rows: 1000
```

You can call the sum method on the result to get the total number of correctly classified dog images in the test set.

```
In [159_ dog_distances_correct_set.sum()
Out[159_ 11
In [ ]:
```
